Welcome to the Shelter Structures Newsletter: Issue #4

Shelter Structures Enables The Precast Industry To Extend Their Working Season

Shelter Structures custom fabric shelters can be configured to have weather-resistant properties, which allows them to be used year-round for a variety of purposes, including mobile aircraft hangers, temporary equipment housing, and weatherproofing job sites around the world.

Some of our recent projects in the precast concrete industry, in which our portable shelters have been used, enabled the workers to extend their working season into the winter months. These projects include our Tully Construction Project in Brooklyn, NY, Rocky Mountain Precast in Denver, CO, and Kiewit in Vancouver, BC.

Rocky Mountain Precast has been able to extend their working season by utilizing one of our shelters to regulate the temperature of the concrete. When the temperature dips below 32 degrees F, concrete sets up too quickly, and is unable to cure properly. By utilizing our portable shelter, they have been able to place heaters inside and control the temperature. This has allowed them to work through the harsh winter months in Denver, thus increasing their yearly production.

Kiewit's Bridge & Marine division has built some of the most challenging bridges and other modern structures in North America. They have been working on a project in Vancouver, BC, that involved the building of a bridge that was cast in place. This decision was made in lieu of ordering precast trusses and having them shipped to the location. By utilizing one of our portable structures, they have been able to shield each part of the project from rain and snow, as well as regulate the temperature, in order to allow the concrete to properly cure.

Shelter Structures has made it possible for these companies, and many more, to increase the amount of working days in their yearly schedule. Our portable structures have enabled them to secure and protect their job sites, as well as shield them from the weather. By providing them with shelter from the weather, we have also helped their companies increase revenue, step up production, and provide safe work environments for workers. We are proud to support the workers in the precast industry.
