Welcome the New Shelter Structures Newsletter: Issue #2

International Achievement Award

This October marked the One-Year Anniversary of Shelter Structures receiving the International Achievement Award from Industrial Fabrics International Association (IFIA). The company was recognized for design excellence in specialty fabrics applications for its NASA Michoud Assembly Facility project in New Orleans.

Protect Your Construction Materials

Shelter Structures is able to accommodate a variety of industrial construction projects, such as mine work, bridge work, energy field projects, and defense projects. For remote location projects like these, you have to find ways to provide cost-effective storage on-site. Damaged or ruined materials result in a large monetary loss as well as lost time. Tensioned fabric structures are an ideal storage solution for remote construction sites.

Protect Your Supplies and Equipment

With tensioned fabric structures, you can keep supplies on hand while protecting them from the weather. The fabric is designed to keep...
