Welcome the New Shelter Structures Newsletter: Issue #1

Family Owned, Premier Custom Fabric Shelters

Welcome to the Inaugural Shelter Structures Newsletter. Future issues will focus on specific applications (like snow protection, salt storage, road work and more) and promos, but today we wanted to tell you about us, and why a custom Tensioned Fabric Building is the best solution. Tensioned fabric buildings are...

Best Materials for the Best Shelters

Shelter Structure buildings combine custom construction with the best materials to give your project the coverage it needs. Whether you're covering a bridge in New York City, protecting a composting facility in Florida, or extending the life of an old asphalt pad for the 75th Ranger Regiment at Ft. Benning, GA we can create the perfect solution for you. We use a laminated fabric coated with an acrylic of PVDR topcoat that carries a manufacturers' warranty of up to 15 years. You can choose either translucent or opaque fabric, and all Shelter Structure fabrics are flame retardant and mildew resistant. Fabric options range from 16-ounce to 32-ounce fabric & several colors are available. All connections on medium to full-size shelters are made with galvanized A325 structural grade bolts. Our frames are fabricated from 3" to 8" galvanized square tube, depending on the size of the structure. We build on 20'space, and adjust the truss size to the overall size. Other manufacturers use a 1.90 galvanized tube for all their shelters, which will require...
